

## ISOVER MULTIPACK

Updated 31.03.2020 Printed 18.01.2021

**ISOVER products are compressed nearly to 1/4 of their free size. The handy Multipack pallet consists of four units of 4-5 packages and contains altogether 16-20 single packets. When the package is opened, ISOVER products return to their normal dimensions immediately and can be installed right away. Thanks to Multipack ISOVER also helps reducing traffic emissions! Multipack is also easy to store and save space on site.**

## Description

ISOVER MULTIPACK helps to save space on site and reduce traffic emissions.

### Saves space on site

On site, wool packages are often subject to short-term storage. Thanks to the ISOVER Multipack, the packages fit in a compact space and are easier to handle. Multipack is a perfect solution for challenges with storage space, especially in limited downtown sites.

The ISOVER Multipack is wrapped in a plastic wrap. This way, it doesn't require extra protection on site when unopened. ISOVER Multipacks can be easily moved on site using a crane or forklift. Lifting the packages easily and quickly into layers helps saving precious time on site.

### Helps to reduce traffic emissions

Thanks to the Multipack, we can deliver five times the amount of wool in one load compared to a non-compressed product. This helps us to save the environment and lower transportation costs. The load can be easily and quickly unloaded for example with a forklift.
